

Da Vinci Vision

Handheld Camera

Start by saving space.

INTUITIVE

Start by saving space.

Begin building an efficient operating room by simplifying room setup with the da Vinci® Handheld Camera.

Plug the da Vinci Handheld Camera into your fourth-generation Vision Cart, then connect a laparoscope and use an 8-mm optical obturator* to place your first port under direct visualization.

Once you have all the ports in place, simply unplug the Handheld Camera, plug in a da Vinci Xi® endoscope, and quickly proceed to docking your da Vinci X™ or da Vinci Xi surgical system.

Now you can make a seamless transition from setup to procedure, every time.

*An 8-mm optical obturator requires a 5-mm laparoscope.

Streamline your workflow

Standardize your da Vinci robotic-assisted surgery cases with less equipment.*

*Handheld Camera uses same endoscope controller as the da Vinci Xi endoscope.

Reduce redundancy and variability in O.R. setup.

Perform da Vinci robotic-assisted surgery cases from start to finish without relying on a separate laparoscopy tower.

Accomplish optical first entry through an 8-mm port.

Any third-party 5-mm to 10-mm rigid laparoscope (with an eyepiece cap compliant with ISO/TS 18339) can be connected to the da Vinci Handheld Camera.

Important safety information

Serious complications may occur in any surgery, including da Vinci surgery, up to and including death. Examples of serious or life-threatening complications, which may require prolonged and/or unexpected hospitalization and/or reoperation, include but are not limited to, one or more of the following: injury to tissues/organs, bleeding, infection and internal scarring that can cause long-lasting dysfunction/pain.

Risks specific to minimally invasive surgery, including da Vinci surgery, include but are not limited to, one or more of the following: temporary pain/nerve injury associated with positioning; a longer operative time, the need to convert to an open approach, or the need for additional or larger incision sites. Converting the procedure could result in a longer operative time, a longer time under anesthesia, and could lead to increased complications. Contraindications applicable to the use of conventional endoscopic instruments also apply to the use of all da Vinci instruments.

For Important Safety Information, indications for use, risks, full cautions and warnings, please also refer to www.intuitive.com/safety.

Individuals' outcomes may depend on a number of factors, including but not limited to patient characteristics, disease characteristics, and/or surgeon experience.

The da Vinci Handheld Camera is intended for endoscopic viewing of internal surgery sites during minimally invasive surgery. It is designed for use with compatible da Vinci Surgical Systems.

Instrument & Accessory Care

It is the responsibility of the owner of the da Vinci surgical system to properly train and supervise its personnel to ensure that the instruments and accessories are properly cleaned, disinfected and sterilized as required by the User's Manual. The da Vinci products should not be used in a clinical setting unless the institution has verified that these products are properly processed in accordance with the da Vinci System User's Manual.
